

Project Experience

Project Title: Onshore Asset Gas Management Project

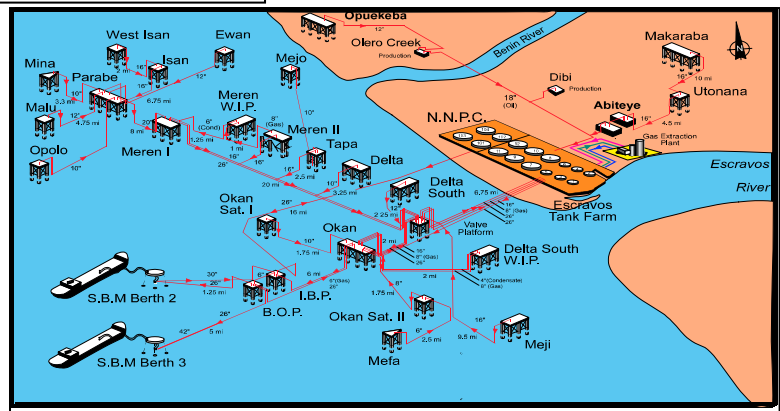

Client: Chevron Nigeria Limited/DeltaAfrik

Scope: Front End Engineering Design

Date: Oct 2007 – Dec 2007

Field Location: Opuekeba, Utonana & Makaraba

Man Hours: 10, 282

PROJECT DESCRIPTION

Chevron Nigeria Limited intends to gather all produced gas currently being flared at its onshore facilities to eliminate continuous gas flaring in the field. The work consists of installation of Multiphase Pumps (MPP), modification of production and test headers to channel all LP multiphase fluid to the suction of the Multiphase Pumps, and all required utilities modifications. The additional facilities will be installed on the existing deck structure located over shallow water in the Delta State.

SEAMETRIC SCOPE

Seametric in partnership with DeltaAfrik participated in the successful execution of the Front End Engineering phase of the project through provision of design/office facilities, ICT and personnel support to the project. The project team was based in Seametric's Ikoyi office.
